

Area of Learning: Mathematics		Apprenticeship Mathematics 12	
Big Ideas		Elaborations	
<ul style="list-style-type: none"> • Design involves investigating, planning, creating, and evaluating. 		<ul style="list-style-type: none"> • Design: • <i>Sample questions to support inquiry with students:</i> <ul style="list-style-type: none"> ○ How is a product designed? ○ How can the design process be applied to meet a need or solve a problem? 	
<ul style="list-style-type: none"> • Constructing 3D objects often requires a 2D plan. 		<ul style="list-style-type: none"> • 3D objects: • <i>Sample questions to support inquiry with students:</i> <ul style="list-style-type: none"> ○ What are some limitations that result when 3D objects are represented in 2D? ○ Which type of 2D representation would be the most appropriate for a 3D object? ○ How does visualization help when solving problems? ○ How does visualization help break down a larger problem? 	
<ul style="list-style-type: none"> • Transferring mathematical skills between problems requires conceptual understanding and flexible thinking. 		<ul style="list-style-type: none"> • Transferring mathematical skills: • <i>Sample questions to support inquiry with students:</i> <ul style="list-style-type: none"> ○ How does awareness and knowledge of mathematics in the workplace make learning more meaningful? ○ What is the mathematics required for a particular trade of interest? 	
<ul style="list-style-type: none"> • Proportional reasoning is used to make sense of multiplicative relationships. 		<ul style="list-style-type: none"> • Proportional reasoning: <ul style="list-style-type: none"> ○ reasoning about comparisons of relative size or scale instead of numerical difference ○ ways of showing proportional comparison when analyzing problems in situational contexts <ul style="list-style-type: none"> – scale diagrams – rates of change • <i>Sample questions to support inquiry with students:</i> <ul style="list-style-type: none"> ○ How are proportions used to solve problems? ○ What is the importance of proportional reasoning when making sense of the relationship between two things? 	
<ul style="list-style-type: none"> • Choosing a tool based on required precision and accuracy is important when measuring. 		<ul style="list-style-type: none"> • measuring: • <i>Sample questions to support inquiry with students:</i> 	

		<ul style="list-style-type: none"> ○ What skills are required for measuring with accuracy? ○ What is the importance of choosing appropriate tools and units when measuring? ○ What are the implications of inaccurate measurements? 	
Learning Standards			
Curricular Competencies	Elaborations	Content	Elaborations
<p><i>Students are expected to do the following:</i></p> <p>Reasoning and modelling</p> <ul style="list-style-type: none"> ● Develop thinking strategies to solve puzzles and play games ● Explore, analyze, and apply mathematical ideas using reason, technology, and other tools ● Estimate reasonably and demonstrate fluent, flexible, and strategic thinking about number ● Model with mathematics in situational contexts ● Think creatively and with curiosity and wonder when exploring problems <p>Understanding and solving</p> <ul style="list-style-type: none"> ● Develop, demonstrate, and apply conceptual understanding of mathematical ideas through play, story, inquiry, and problem solving ● Visualize to explore and illustrate mathematical concepts and relationships ● Apply flexible and strategic approaches to solve problems 	<ul style="list-style-type: none"> ● thinking strategies: <ul style="list-style-type: none"> ○ using reason to determine winning strategies ○ generalizing and extending ● analyze: <ul style="list-style-type: none"> ○ examine the structure of and connections between mathematical ideas (e.g., proportional reasoning, metric/imperial conversions) ● reason: <ul style="list-style-type: none"> ○ inductive and deductive reasoning ○ predictions, generalizations, conclusions drawn from experiences (e.g., with puzzles, games, and coding) ● technology: <ul style="list-style-type: none"> ○ graphing technology, dynamic geometry, calculators, virtual manipulatives, concept-based apps ○ can be used for a wide variety of purposes, including: <ul style="list-style-type: none"> – exploring and demonstrating mathematical relationships – organizing and displaying data – generating and testing inductive 	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"> ● measuring: using tools with graduated scales; conversions using metric and imperial ● similar triangles: including right-angle trigonometry ● 2D and 3D shapes: including area, surface area, volume, and nets ● 3D objects and their views (isometric drawing, orthographic projection) ● mathematics in the workplace ● financial literacy: business investments and loans 	<ul style="list-style-type: none"> ● measuring: <ul style="list-style-type: none"> ○ unit analysis ○ precision and accuracy ○ breaking of units into smaller divisions to get more precise measurements ○ extension: project or presentation to share measurement concepts and skills used in a field/career of interest ● triangles: <ul style="list-style-type: none"> ○ situational examples such as stairs and roofs ○ application of Pythagorean theorem ○ situations involving multiple right-angle triangles ● 3D objects: <ul style="list-style-type: none"> ○ creating and reading various types of technical drawings ○ extension: project or presentation to share geometry concepts and skills used in a field/career of interest ● mathematics in the workplace: <ul style="list-style-type: none"> ○ compare and contrast mathematics used in different workplace contexts ○ interview someone working in a field

<ul style="list-style-type: none"> Solve problems with persistence and a positive disposition Engage in problem-solving experiences connected with place, story, cultural practices, and perspectives relevant to local First Peoples communities, the local community, and other cultures <p>Communicating and representing</p> <ul style="list-style-type: none"> Explain and justify mathematical ideas and decisions in many ways Represent mathematical ideas in concrete, pictorial, and symbolic forms Use mathematical vocabulary and language to contribute to discussions in the classroom Take risks when offering ideas in classroom discourse <p>Connecting and reflecting</p> <ul style="list-style-type: none"> Reflect on mathematical thinking Connect mathematical concepts with each other, other areas, and personal interests Use mistakes as opportunities to advance learning Incorporate First Peoples worldviews, perspectives, knowledge, and practices to make connections with mathematical concepts 	<p>conjectures</p> <ul style="list-style-type: none"> – mathematical modelling <ul style="list-style-type: none"> other tools: <ul style="list-style-type: none"> ○ manipulatives such as rulers and other measuring tools Estimate reasonably: <ul style="list-style-type: none"> ○ be able to defend the reasonableness of an estimated value or a solution to a problem or equation (e.g., reasonableness of measurements) fluent, flexible, and strategic thinking: <ul style="list-style-type: none"> ○ including: <ul style="list-style-type: none"> – using known facts and benchmarks, partitioning, applying whole number strategies to expressions involving proportional reasoning, financial analysis, and logic – choosing from different ways to think of a number or operation (e.g., Which will be the most strategic or efficient?) Model: <ul style="list-style-type: none"> ○ use mathematical concepts and tools to solve problems and make decisions (e.g., in real-life and/or abstract scenarios) ○ take a complex, essentially non-mathematical scenario and figure out what mathematical concepts and 		<p>of interest</p> <ul style="list-style-type: none"> ○ extension: project that includes an element of design and mathematical thinking <ul style="list-style-type: none"> financial literacy: <ul style="list-style-type: none"> ○ business investments, loans (lease versus buy), graphical representations of financial growth, projections, expenses ○ extension: project or presentation to share mathematical concepts and skills used in a field/career of interest
---	---	--	--

	<p>tools are needed to make sense of it</p> <ul style="list-style-type: none"> • situational contexts: <ul style="list-style-type: none"> ○ including real-life scenarios and open-ended challenges that connect mathematics with everyday life • Think creatively: <ul style="list-style-type: none"> ○ by being open to trying different strategies ○ refers to creative and innovative mathematical thinking rather than to representing math in a creative way, such as through art or music • curiosity and wonder: <ul style="list-style-type: none"> ○ asking questions to further understanding or to open other avenues of investigation • inquiry: <ul style="list-style-type: none"> ○ includes structured, guided, and open inquiry ○ noticing and wondering ○ determining what is needed to make sense of and solve problems • Visualize: <ul style="list-style-type: none"> ○ create and use mental images to support understanding ○ Visualization can be supported using dynamic materials (e.g., graphical relationships and simulations), concrete materials, drawings, and diagrams. 		
--	---	--	--

	<ul style="list-style-type: none"> • flexible and strategic approaches: <ul style="list-style-type: none"> ○ deciding which mathematical tools to use to solve a problem ○ choosing an effective strategy to solve a problem (e.g., guess and check, model, solve a simpler problem, use a chart, use diagrams, role-play) • solve problems: <ul style="list-style-type: none"> ○ interpret a situation to identify a problem ○ apply mathematics to solve the problem ○ analyze and evaluate the solution in terms of the initial context ○ repeat this cycle until a solution makes sense • persistence and a positive disposition: <ul style="list-style-type: none"> ○ not giving up when facing a challenge ○ problem solving with vigour and determination • connected: <ul style="list-style-type: none"> ○ through daily activities, local and traditional practices, popular media and news events, cross-curricular integration ○ by posing and solving problems or asking questions about place, stories, and cultural practices • Explain and justify: 		
--	--	--	--

	<ul style="list-style-type: none"> ○ use mathematical arguments to convince ○ includes anticipating consequences ● decisions: <ul style="list-style-type: none"> ○ Have students explore which of two scenarios they would choose and then defend their choice. ● many ways: <ul style="list-style-type: none"> ○ including oral, written, visual, use of technology ○ communicating effectively according to what is being communicated and to whom ● Represent: <ul style="list-style-type: none"> ○ using models, tables, graphs, words, numbers, symbols ○ connecting meanings among various representations ● discussions: <ul style="list-style-type: none"> ○ partner talks, small-group discussions, teacher-student conferences ● discourse: <ul style="list-style-type: none"> ○ is valuable for deepening understanding of concepts ○ can help clarify students' thinking, even if they are not sure about an idea or have misconceptions ● Reflect: <ul style="list-style-type: none"> ○ share the mathematical thinking of
